DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: Fs1, Fs2, Fs3, Fs4, Fs5, Fs6, F31, Fe2, Fe3, Fe4, Fe5, Fe6, y1, y2, y3, P1, P2, P3. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: Fs1, Fs2, Fs3, Fs4, Fs5, Fs6, Fs1, Fe2, Fe3, Fe4, Fe5, Fe6, y1, y2, y3, P1, P2, P3. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR

1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 5, 19-21, 23-28, 33, and 34 rejected under 35 U.S.C. 102(b) as being anticipated by Grable (4003773).

Grable teaches a process for producing ultrashort-cut fibers (Figure 1) comprising binding a plurality of individual filament groups in a densely parallel state, embedding in liquefied paraffin (20), solidifying the paraffin, and shaving the fibers to less than 0.1 mm (Column 1, line 40) at an orthogonal orientation, as well as the apparatus including an adjustable back and forth moving shaving stand (40).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3, 4, 13-18, 22, and 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grable in view of Spain (3921874).

Grable essentially teaches the invention as detailed above, but fails to specifically teach using water in ice form as the embedding agent, which Spain teaches (Example). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have utilized water as an embedding agent, so as to reduce the cost of production. Water is less expensive than paraffin wax, and the ordinarily skilled artisan would have appreciated the benefits of such a material. Likewise, the cooling temperatures necessary for freezing water would be more beneficial to the machinery than the heating elements needed for paraffin wax, reducing mechanical heat generated during production. In regards to the types of fiber than can be processed, the device of the combination would be more than capable of processing bicomponent fibers of 0.001-10 decitex.

Allowable Subject Matter

7. Claims 6-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dennis et al (3602410) teaches what is well known in the art.
